Dr. Michael Yeadon: Athletes Are Being Injured & Killed By COVID Vaccines

written by Veronika Kyrylenko

The Biden administration’s aggressive push to vaccinate all eligible Americans, which now includes children as young as five, is based on the dogma that “vaccines are safe and effective.”

The CDC, however, confirmed back in July that the COVID vaccines are not effective at preventing one from getting COVID-19 and passing it to others, while a DOD study indicated that the jabs are not as effective at protecting one from being hospitalized. Quite the opposite: COVID shots might actually increase one’s chances of landing in the hospital with COVID. Judging from the number of injuries and deaths associated with the vaccines reported to the VAERS, they also don’t seem quite safe, either.

As the latest example of the jabs un-safety, former Pfizer executive Dr. Michael Yeadon pointed to the “statistically huge increases in collapsing / dying fit sportspeople.”

On his Telegram account, the renowned British pharmacologist wrote last week,

Folks,
You’ll probably recall how VERY rare it is that top sports people collapse & die, especially
right in front of you, in the pitch?
I remember an unfortunate footballer in England to whom this happened, years ago.
I don’t remember any others.
Well, now in the space of a few weeks, almost two dozen such incidents.
You’ll immediately apprehend how unusual this is, and it’s not bad luck.
It’s because only recently has covid19 vaccination reached these age groups, late teens to late 20s.

Dr. Yeadon further explains that the COVID shots make our cells produce an “unregulated amount” of the toxic part of the virus — a spike protein that damages other cells. While the CDC is calling the spike protein a “harmless piece of the virus” and telling us that the mRNA vaccine only remains in the inoculation site, i.e., the shoulder muscle, and then gets broken down and disposed of, it actually travels throughout the body.

“Not only are the amounts [of the spike protein] uncontrolled in any way, we also have no idea, in any individual, WHERE in the body this dangerous protein is made,” the doctor warned.

He observed that since the spike protein is a potent biological toxin, it initiates changes in blood that can lead to blood clots, bleeding, and heart issues.

Dr. Yeadon has pulled together a couple dozen recent examples of athletes between the ages of 18-33 dying or becoming injured as a result of COVID vaccination. “I surmise that all these sports people are being injured & killed by the covid19 vaccines,” the doctor wrote.

The injuries and deaths among young people with superior physical fitness happened as the result of the pressure from their sports clubs and leagues to get a shot as a condition of participation in the games, which in turn was inspired by the “lethal fraud from our governments & their lying advisors.”

The doctor added that young people are not at risk of getting or transmitting the virus, let alone dying from it, and there is “NO REASON why these people have been vaccinated.”

A closer look at the cases of the young athletes suffering from severe complications of COVID jabs makes a grim read:

Saurashtra batter Avi Barot, a former India Under-19 captain and a member of the Ranji Trophy winning team in the 2019-20 season, has died after suffering a cardiac arrest at a shockingly young age of 29.

Barot’s wife is expecting their first child.

Footballer Wessam Abou Ali (22) is awake but “shocked” in hospital after collapsing on the pitch on Saturday. The Dane was rushed to hospital after the heart-wrenching incident.

At 25, a Belgian football player Jente Van Genechten suffered cardiac arrest on the pitch....
“This is the first time that my heart has really stopped beating. I do not understand why.”

A football match in Norway’s second division was halted ... after Icelandic midfielder Emil Pálsson (28) suffered a cardiac arrest during play.

27-year-old Jens De Smet from Maldegem passed away last Saturday after becoming unwell during a football match.... The news of Jens’ death was a blow to his teammates.

Promising cyclist [Greg Luyssen, 22] from Adinkerke [Belgium] must stop immediately after heart muscle failure: “They think the corona vaccine is the cause.”

Tennis star Jeremy Chardy (34) has admitted he does not know when he will return to the sport and fears he may have to bring forward his retirement because of health problems he says he has suffered since taking the Pfizer Covid vaccine.”

Kyle Warner, a 29-year-old professional mountain bike racer, developed pericarditis, POTS [Postural orthostatic tachycardia syndrome, a condition that affects blood flow] and reactive arthritis following his second dose of Pfizer’s COVID-19 shot.

Florian Dagoury, currently the world’s top static breath-hold free diver, has been diagnosed with myocarditis and pericarditis 40 days following his second dose with the Pfizer vaccine.

More stories like those were posted on Dr. Yeadon’s Telegram channel, and also by the LifeSiteNews.

A national summit on COVID held last week in Florida and attended by thousands of scientists and doctors unequivocally recommended excluding children and adolescents from COVID vaccination.
