The Growing Threat of Smart Meters

Sustainable Development is code for a policy designed to transform human society, essentially eliminating individual life decisions and replacing them with top-down, one-size-fits-all government control. In steady fashion, the agenda for this new policy, designed at the international level, is put into place piece by piece with a new government council here, and new regulation there, each designed to appear as a “local” development program. Like the proverbial frog in the slowly boiling pot, many Americans fail to notice the rise in government heat.

The main course of action to impose the new agenda is through the pretense of environmental protection: “Sorry about your rights, but if we don’t save the planet, then we will all perish!” And so with the devastation of a thousand pin pricks, America and its form of government is being changed through the creation of non-elected boards, councils, and regional governments designed to enforce the new regulations and “assure that we protect the environment.”

The pin pricks come disguised as such issues as controls on community development; controls on use of private property; controls on use of open space; creation of development areas, many times under the excuse of historic preservation; communities designed on the blueprint of pack and stack housing; making it harder to drive as roads are narrowed, even forcing cars to share the road with bicycles; the enforcement of expensive mass-transit boondoggle projects; and the never-ending spending spree on inefficient, unworkable alternative energy, such as wind and solar power.

In fact, control of energy and water are the two most effective tools in the enforcement of the Sustainable Development agenda. Without energy and water, human society stops. Using strict controls on how, or even if, energy and water can be used provides government with the power to dictate every aspect of society.

So how is that control carried out? There are obviously several ways, including regulations and taxes on production of gasoline; EPA restrictions on energy production; and government subsidies to create and enforce the use of alternative energy, specifically wind and solar.

However, controlling energy use in individual homes provided a more difficult obstacle than mere taxes or regulations. Government needed to be able to monitor energy use and individual habits in every single home. And so, the Smart Meter was born.

The Smart Meters are being installed on homes across the country, replacing the old-style analog meters. The power companies are telling their customers that the Smart Meters will help them save money on electric bills by helping control usage. They also claim that the Smart Meters will help the power companies operate more efficiently by eliminating the need for meter readers to physically read the meters as they do with analog meters. However, these sales pitches from the power companies hide the real facts behind the push to replace every analog meter in the nation with the Smart Meters.

There are several major problems for homeowners as the Smart Meters are installed. Here are just a few:

- The cost of heating and cooling homes with Smart Meters is going up because of the inefficient alternative energy that is more expensive than coal and nuclear power.
- Homeowners with Smart Meters in place are discovering that they can't heat or cool their homes during peak power usage as the electric companies control the thermostats and automatically cut back on usage.
- Property rights are being violated by Smart Meter installers who come onto property against the will of the owners.
- A 2012 Congressional Report now reveals that power companies are able to read data from the meters that reveals residents' daily schedules and their personal behavior, the types of appliances they use, even if there are certain types of medical equipment in use in the home. This information can then be sold to private concerns or placed in government files. It can lead to identity theft and unwarranted government surveillance.
- Evidence is now emerging that the Smart Meters, which operate by emitting electromagnetic signals, have become a health hazard, as thousands of Smart Meters in neighborhoods blast a non-stop signal, creating what is called Electromagnetic Smog. The electromagnetic radiation is dangerous for the elderly, children, pets, and those subject to such disorders as epilepsy, heart disease, and more. It can lead to disruptive sleep patterns, chronic fatigue, depression, headaches, and much more.

As Americans become aware of these threats they have begun to oppose the installation of Smart Meters on their property. Some local and state governments, when faced with the health complaints, have offered opt-out provisions. Others have responded using force, resulting in arrests, as in Naperville, Illinois. In other places, power companies have shut off electricity to homes of those protesting the Smart Meters.

As the battle against the Smart Meters grows across the nation, Americans need to understand the issue, the dangers, and the real reasons behind the government's drive to force them on angry and protesting homeowners, violating their property rights and endangering their health in the process.

Smart Meters are designed to provide government with detailed information on your energy use, your movements in your home, the way you use your personal private time, and even how many people are in your home at any given time. It is an unconstitutional invasion of your home by government, as set down in the Fourth Amendment to the U.S. Constitution.

My organization, the American Policy Center (APC), has produced a comprehensive special report entitled "Sustainable Development and the Control of Energy (The growing battle over Smart Meters)." This report details the real reasons behind the government's enforcement of the Smart Meters, the health and privacy violations, and the political agenda behind it all. This special report is available free at <http://americanpolicy.org/smart-meters-report/>. I urge every concerned American to get a copy.

Every American has a duty to preserve freedom by protesting and stopping the forced installation of these devices.
