Enemy Within the Gates

Headlines: “What War With China Would Look Like.” “How War With China Begins.” “The Coming War With China.” “Is War With China Inevitable?” “China Will Go to War With the World in the Next Six Years, Experts Say.” Yes, there are plenty of “experts” now warning that war with Communist China is not only inevitable but imminent. And many of them are the same experts who only a few years (or a few months) ago were still singing the praises of Xi Jinping and extolling the glorious profits to be made in the People’s Republic. Klaus Schwab and the globalist Davos billionaires are still enthralled with the demented idea of a New World Order anchored in China, but much of the rest of the world has awakened to the ugly reality of what a “world order” under Xi and comrades would be like.

[AP Images](#)

Fraternalizing with the enemy: President Bill Clinton reviews Chinese troops in Beijing with dictator Jiang Zemin. It was Clinton who, in exchange for campaign funds, authorized the transfer of crucial guided-missile technology to China, and who ensured Chinese entry into the World Trade Organization.

However, while it is refreshing and encouraging to witness the belated awakening, the newly awakened, unfortunately, are still getting it very wrong. The war with China is not “coming,” it’s already here. True, we’re not yet in a “shooting war,” but if you wait for missiles to be launched and bombs to fall, you’ve already lost. China launched the war years (nay, decades) ago. They call it “unrestricted warfare” and “war by other means.” They have been engaged in *total* war: political, economic, social, and psychological. They are using trade, investment, theft, espionage, infiltration, bribery, propaganda, intimidation, drugs, organized crime, social turmoil, cyber attacks, social media, biological agents (as in viral pandemics), and much more as weapons of destabilization.

They are weakening us by hollowing out our industrial/manufacturing base and making us dependent upon them for just about everything, from computer chips, smartphones, and critical electronic components to clothing, tools, machinery, and medicines.

This total-war doctrine is not something new with Xi Jinping, he has simply resurrected and intensified the “Ta Ta, Tan Tan” (Fight Fight, Talk Talk) doctrine that Mao Zedong used against the anti-communist government of Generalissimo Chiang Kai-shek during the 1930s and ’40s. Keep talking, keep negotiating, keep getting concessions — until you’re strong enough to strike a deadly blow. Chiang Kai-shek saw through the deception, but he was forced by traitors and dupes in the Roosevelt and Truman administrations to acquiesce to “partnership” with the communists — not once, but four times, and each time proved to be a deadly trap. The men who betrayed not only Chiang but all the people of China — Lauchlin Currie, Owen Lattimore, John Stewart Service, Joe Stilwell, George Marshall, Harry Hopkins, Harry Dexter White, Dean Acheson, et al. — have their counterparts today. They populate the State

Department, Wall Street, Big Tech, Big Media, Big Pharma, universities, and think tanks. They are the habitués of the Council on Foreign Relations, the World Economic Forum, the Trilateral Commission, the Aspen Institute, the Club of Rome, and the like. For the past five decades they have lobbied furiously for the massive transfers of capital, technology, and manufacturing plants that have built China into the hegemon it now is, while simultaneously stripping America of her global leadership in science, engineering, technology, manufacturing, and innovation. This, we were told, would tame the communist dragon and transform the Chinese Communist Party membership into friendly capitalists. Moreover, said the “experts,” China would become our ally against the Soviet Union. Instead, this course has brought us to precisely the point that many clear-sighted Cassandras warned it would: the brink of national suicide.

Communist China, like the old Soviet Union, is completely a creature of the West, and principally the United States. In his massive three-volume work *Western Technology and Soviet Economic Development, 1917 to 1965* (Hoover Institution Press, 1968, 1970, 1973), Professor Antony C. Sutton meticulously documented the immense decades-long transfer of economic and technological assistance from the United States to the communist regimes of Lenin, Stalin, and Khrushchev. This included, astoundingly, technology and assistance for virtually every Soviet weapon system — from tanks and submarines to missile technology. Soviet deployments of these systems were then cited as reasons why we must spend vast new outlays for “defense” against a threat we had created in the first place. In essence, the American taxpayers and American science and industry were funding and building both sides in the Cold War.

We are now in much the same position *vis-à-vis* China. With its centrally planned command economy, China gives the appearance of economic dynamism and strength but is riddled with fatal flaws, and without continued injections of capital, know-how, and technology from abroad, it would crumble. The United States, as weakened as it is, still stacks up well versus China militarily and economically. But for how long, if the suicidal transfer treachery is allowed to continue?

Does it make more sense to rattle the sabers and pledge to defend Taiwan (or Japan, the Philippines, the South China Sea, Australia, or New Zealand) — or to cut off the financial and technological aid that is enabling Beijing to intimidate and threaten these countries? And if we fail to reverse the devastating course of the past few decades, will a further strengthened China be less likely to increase its belligerence? It is that simple. Don’t think so? In what follows, we will not be able to present the amount of evidence Dr. Sutton summoned in his monumental work, but it should serve to provide an alarming picture of which most Americans are unaware.

Treasonous Tech Transfers

On February 16, 2023, *China Daily*, an official organ of the Chinese Communist Party (CCP), reported that the Haiyang nuclear power plant in Shandong Province is commencing work on a 23-kilometer main transport pipeline to transmit nuclear-generated heat that “is expected to meet the heating demand of 1 million residents.” It is the initial stage of a planned nationwide rollout of central heating throughout China’s rapidly growing system of nuclear power plants. The story received virtually no coverage by U.S. news organizations, just as the same media outlets have largely ignored Communist China’s aggressive plans to dominate the global nuclear energy industry. According to the International Atomic Energy Agency, China has 19 new nuclear plants under construction, more than double the next

competitor, India, which is building eight new plants. Tied for third place are Russia and Turkey, both of which have four under construction. Meanwhile, the United States, which pioneered nuclear energy and was once the undisputed leader in the field, is finally building two new nuclear power plants. Those are the first we have begun construction on since the 1980s, when anti-nuclear hysteria whipped up by foundation-funded enviro-activists and their media accomplices killed nuclear plant construction in this country.

However, the restrictions on nuclear energy here have not prevented American behemoths such as General Electric and Westinghouse from helping the Chinese Communist Party attain its nuclear energy goals. As with virtually every other industry the Beijing regime has targeted, it has been dependent on American (along with Japanese and European) technology to leapfrog over otherwise insurmountable hurdles.

In 2006, Microsoft founder Bill Gates launched TerraPower to build advanced nuclear power plants, focusing on small modular reactors (SMRs). In 2013, TerraPower signed an agreement with the state-owned China National Nuclear Corporation (CNNC) to build a first-of-its-kind Traveling Wave reactor. However, thanks to export security restrictions put in place by President Donald Trump, Gates announced in 2018 that TerraPower would be forced to pull out of the project.

Another example is China's vaunted new nuclear-capable hypersonic missile. When China test-fired this new "game changer" in October 2021, it did grab headlines, but most of the stories completely missed the main issue, which was that it is U.S. technology that enabled the People's Liberation Army (PLA) to leapfrog America and get to the hypersonic finish line ahead of us. As we detailed in a series of articles in *The New American* in December 2021 titled "[China's Tech War](#)," it would have been impossible for China to have catapulted into first place in the race without the supercomputing power provided by American advanced chip makers Intel, Nvidia, and Advanced Micro Devices, Inc. Also contributing to this continued Chinese space-armament effort are British chipmaker Arm Ltd. (owned by the Japanese conglomerate SoftBank Group), Taiwan Semiconductor Manufacturing Company, South Korea's Samsung, Taiwan's United Microelectronics Corporation, and the Netherlands' ASML.

The AI Battlefield

Here's another example: American companies have been making huge investments of capital and technology in hundreds of Chinese artificial intelligence (AI) companies, despite the warnings of scientists and military experts that AI will be the decisive technology in the warfare of the future. China is now second only to the United States in AI development — and closing fast, thanks to help from the usual suspects.

A report released this February by Georgetown University's Center for Security and Emerging Technology found that American investors funneled over \$40 billion into 251 Chinese AI companies between 2015 and 2021. This represented at least 37 percent of the total investment in the Chinese AI effort. Among the leading culprits are Goldman Sachs, GGV Capital, Intel, and Qualcomm. BlackRock and Morgan Stanley Capital International indexes are also huge drivers of investment of all sorts into China. Wall Street refuses to give up its illicit love affair with the mass-murderers in Beijing. While wrapping themselves in the righteous mantle of ESG (Environmental, Social, Governance) ratings and DEI (Diversity, Equity, Inclusion) mandates, they care not a wit about China's genocide, torture, omnipresent surveillance, censorship, slave labor, environmental devastation, drug dealing, organ

harvesting, and other crimes too numerous to mention.

As critics have pointed out, China is a unified state, under the absolute control of the CCP. There is no such thing as a private company. China's Military-Civil Fusion means the People's Liberation Army (PLA) "has the right to raid any non-military Chinese company for any technology it decides could advance its military strength," Richard Fisher of the International Assessment and Strategy Center has noted. Under Xi this CCP-PLA control has become more pronounced, with many companies now including a Party Committee in their corporate structure, manned by CCP officials to ensure that the party line is followed.

Belated Awakening

On November 12, 2020, President Trump issued Executive Order 13959 to stop American investors from buying stock in Communist Chinese Military Companies (CCMCs) and to force them to divest from same by January 28, 2021. It was only a modest first step and affected only 44 of the thousands of Chinese companies in which American funds are now invested. However, Wall Street balked and screamed, and Biden listened to his gilded patrons. On January 26, two days before the deadline set by the Trump administration for the divestment order, the Biden Treasury Department's Office of Foreign Assets Control issued General License No. 1A to permit Americans to continue acquiring shares in companies associated with CCMCs until May 27.

President Biden's handlers are trying to craft a new "tough on China" image for him. It's a tall order, even with all the media shills dutifully barking along like trained seals, regurgitating the White House press office talking points. Besides the Hunter Biden laptop revelations, including the multimillion-dollar China deals (with "10 percent for the Big Guy"), there are Joe's earlier public boasts (which he now wants us to forget) about being the American politician most closely tied to Xi Jinping.

Partners in crime: President Biden and Chinese dictator Xi Jinping shake hands at the G-20 summit in Bali. Despite his rhetoric in support of Taiwan, Biden is not likely to take a principled stand against the Chinese Communist Party because of his family's well-documented ties to China, including many lucrative sweetheart deals. (AP Images)

Belatedly, very belatedly, many Americans are coming to the realization that we have been deceived for two generations, not only by Communist China but by our political and business ruling classes that are

in bed with Beijing. The worldwide China-style Covid lockdowns and mandates were giant wakeup calls. Ditto for the China-originated fentanyl assault that is wreaking havoc all across America. Another ditto for the discovery that the Biden administration had allowed Chinese intelligence to establish a “police station” in New York City to harass and terrorize Chinese American citizens. And double dittos for the recent Energy Department report that finally admits the Covid-19 virus very likely leaked from the Wuhan lab — the same lab that we were forbidden to even *suspect* as the source of the virus, under pain of being canceled, banned, and labeled as a “conspiracy theorist” and misinformation/disinformation agent. And triple dittos for the Chinese “spy” balloon that the Biden administration impotently watched and allowed to traverse our entire nation coast-to-coast, including over our most sensitive military installations.

On February 28, the newly formed House Select Committee on the Chinese Communist Party held its first hearing, under the chairmanship of Representative Mike Gallagher (R-Wis.). Considering the bitter polarization that has typified many if not most committee hearings of the past several years, the Democrats and Republicans displayed remarkable bipartisan unity in their concerns over China’s geopolitical, military, and economic threat to the United States and its atrocious record on human rights at home.

Scott Paul, president of the Alliance of American Manufacturers, one of the witnesses to testify, laid out a long list of horrifying statistics demonstrating the calamitous decline of many fields where America was once a world leader, but willfully turned over that leadership to China.

“We’ve documented how energy subsidies, ignored pollution controls, direct support, and other mechanisms bolstered China’s steel, glass, paper, and tire sectors more than a decade ago,” Paul testified. “U.S. employment and market share in those industries plummeted in the 2000s as China’s share grew. China now produces 54 percent of the world’s steel and 51 percent of float glass, as well as 75 percent of the world’s EV batteries, 80 percent of polysilicon utilized in solar panels, and 80 percent of some active pharmaceutical ingredients and components.”

“The CCP has sought to accomplish its objectives by drawing in American investment and technology, and it has done so quite successfully,” he continued. “Annual U.S. foreign direct investment in China has grown from \$11 billion in 2000 to \$118 billion in 2021. Cumulatively, U.S. companies have invested at least \$1.3 trillion in China over that timeframe.”

Murder and Coverup

Toward the end of World War II, the pro-communist and globalist forces in the United States government used every lever within their power and every vicious trick to undermine America’s most stalwart ally in Asia, Chiang Kai-shek, and to turn over China to Joseph Stalin and his leading henchman in Asia, Mao Zedong. Ten days after the end of the war, U.S. Army Captain John Morrison Birch was sent on a mission to meet up with surrendering Japanese forces. He was a legendary and heroic figure throughout China, having first come there as a Baptist missionary, and later distinguishing himself with incredible acts of bravery throughout the war, including rescuing the famous Colonel Jimmy Doolittle and his American flyers shot down over China. Captain Birch was murdered by Chinese Communists, and his murder was covered up by U.S. government officials who would not allow his death to become a cause célèbre that might upset their plans to turn China over to Mao’s communists.

Robert Welch, a successful manufacturer, scholar, and anti-communist activist, discovered this crime and its coverup and wrote [The Life of John Birch](#) in 1954. In 1958, he founded The John Birch Society, an educational, patriotic, anti-communist organization, naming it in honor of Captain Birch, whom he saw as a heroic martyr and the first casualty of the Cold War.

From its beginning more than 60 years ago, [The John Birch Society](#) has sounded the alarm concerning the betrayal and treason that was responsible for turning China over to communism, and the ongoing treachery that has continued to make the Beijing regime an ever-growing global threat. *The New American*, published by the Society, has carried on that fight, and will continue to do so.
