

Study: Common Core Had “Significant Negative Effect” on Students

From [FreedomProject Media](#):

A barely noticed [study](#) on the Obama-backed Common Core scheme revealed that the controversial national “education” standards caused a “significant” decline in student achievement.

Basically, if the Common Core scheme had never existed, students would have been much better off, according to researchers at the federally funded Center on Standards, Alignment, Instruction and Learning (C-SAIL).

Results show that student performance declined in both reading and math as a result of Common Core, the researchers noted.

“Contrary to our expectation, we found that [Common Core] had significant negative effects on 4th graders’ reading achievement during the 7 years after the adoption of the new standards,” the study found.

Indeed, Common Core is packed with quackery such as the “sight-word” method that was first exposed as a dangerous failure over 150 years ago when it was tried in Boston. [Even contributors to the Common Core reading section are blowing the whistle!](#)

The controversial standards also “had a significant negative effect on 8th graders’ math achievement 7 years after adoption based on analyses of [National Assessment of Educational Progress] composite scores,” according to the analysis.
