Fauci: Mandatory Coronavirus Immunity Cards Under Consideration

Here's what they are planning: A national health ID. This has been under development by international agencies along with Gates Foundation for several years. Planning for this is being done by ID2020, an organization supported by Accenture, the Rockefeller Foundation, Microsoft Corp., and others. Of note, among the others is Gavi, the Vaccine Alliance, whose support of ID2020 demonstrates the interest of would-be global population managers in tying vaccination to identification.

A first step toward implementing this goal is conditioning people to accept the idea that they will need to prove their vaccination and health status before being allowed by government to engage in any activities that, heretofore, were exercised without restriction by a free people. To that end, Dr. Anthony Fauci, the head of the National Institute of Allergy and Infectious Diseases (NIAID) and key member of the Trump Administration's coronavirus task force, admitted that the federal government is considering forcing citizens to use coronavirus immunity cards.

{modulepos inner_text_ad}

"You know, that's possible," [Fauci told CNN](#). "I mean, it's one of those things that we talk about when we want to make sure that we know who the vulnerable people are and not," he continued. "This is something that's being discussed. I think it might actually have some merit, under certain circumstances."

The idea was also floated by Bill Gates, former head of Microsoft and current international supporter of digital ID schemes tied to vaccination. During an "Ask Me Anything" session on the social media site Reddit, [Gates said](#) he supported using immunity IDs. "Eventually we will have some digital certificates to show who has recovered or been tested recently or when we have a vaccine who has received it," Gates remarked.

The constellation of efforts Gates has been making around digital identity and vaccination includes funding research at MIT on encoding health and identity data into a quantum-dot based system that can be embedded in the skin. Described by researchers in the journal *Science Translational Medicine*, [the researchers said](#) they had developed an "approach to encode medical history on a patient using the spatial distribution of biocompatible, near-infrared quantum dots (NIR QDs) in the dermis. QDs are invisible to the naked eye yet detectable when exposed to NIR light."

The journal translated this into less technical terminology:

McHugh et al. developed dissolvable microneedles that deliver patterns of near-infrared light-emitting microparticles to the skin. Particle patterns are invisible to the eye but can be imaged using modified smartphones. By codelivering a vaccine, the pattern of particles in the skin could serve as an on-person vaccination record.... These results demonstrate proof of concept for

intradermal on-person vaccination recordkeeping.

Records in scientific journal research databases reveal sources of funding for studies like this one. In this case, funding was provided by the Bill and Melinda Gates Foundation along with the National Science Foundation, the National Cancer Institute, and the National Institutes of Health here in the United States. Funding sources also included the Youth Innovation Promotion Association of the Chinese Academy of Sciences, the China Scholarship Council, and the National Natural Science Foundation of China.

Fauci and the NIAID have a history of working with the Gates Foundation on worldwide vaccination programs. In 2010, [the World Health Organization launched](#) the “Global Vaccine Action Plan to guide discovery, development and delivery of lifesaving vaccines.”

“The World Health Organization (WHO), UNICEF, the National Institute of Allergy and Infectious Diseases (NIAID) and the Bill & Melinda Gates Foundation have announced a collaboration to increase coordination across the international vaccine community and create a Global Vaccine Action Plan,” said the WHO press release announcing the plan.

It continued: “The collaboration follows the January 2010 call by Bill and Melinda Gates for the next ten years to be the Decade of Vaccines. The Global Vaccine Action Plan will enable greater coordination across all stakeholder groups — national governments, multilateral organizations, civil society, the private sector and philanthropic organizations — and will identify critical policy, resource, and other gaps that must be addressed to realize the life- saving potential of vaccines.”

The leadership council for this initiative included:

- Margaret Chan, Director General of WHO
- Anthony Fauci, Director of NIAID, part of the National Institutes of Health
- Anthony Lake, Executive Director of UNICEF
- Joy Phumaphi, Chair of the International Advisory Committee and Executive Secretary, Adrian Leaders Malaria Alliance
- Tachi Yamada, President of Global Health at the Bill & Melinda Gates Foundation

Among these names, readers of *The New American* may be familiar with [Anthony Lake](#), who previously served as National Security Advisor to President Bill Clinton. Lake, who had been nominated by Clinton to head the Central Intelligence Agency, infamously wasn’t sure if notorious Soviet spy Alger Hiss was actually a spy.

In its documentation, the [Global Vaccine Action Plan](#) called for numerous steps, including the use of ID technologies to track those vaccinated. According to the Global Vaccine Action Plan 2011-2020 summary available as a PDF from WHO:

Reaching every community will call for an understanding of the barriers to access and use of immunization; it will also require the underserved to be identified, and micro-plans at the district and community levels to be reviewed and revised in order to ensure that these barriers can be overcome. The rapid expansion of information technology should be leveraged to establish immunization registries and electronic databases that will allow each individual’s immunization status to be tracked, timely reminders to be sent when immunization is due and data to be accessed easily to inform actions. The introduction of unique identification numbers could be a catalyst for

the establishment of such systems.

As if tracking and controlling people isn't bad enough, there may be a more sinister population control plan afoot. Speaking at a TED conference in 2010 on the subject of cutting carbon emissions to prevent global warming, [Bill Gates pointed to population control](#) as one area where an impact could be made. Among other things, he singled out vaccination as having a role in population control.

"First we've got population," Gates began. "The world today has 6.8 billion people. That's headed up to about about nine billion. Now if we do a really great job on new vaccines, health care, reproductive health services, we could lower that by, perhaps 10 or 15 percent."

Now, most people make the reasonable conclusion that vaccines, making people less prone to disease and, therefore, healthier, promote population stability, if not outright growth. But Gates, quite curiously, tied vaccines to population control in this talk.

Subsequently, Melinda Gates has attempted to explain his counterintuitive philosophy on vaccines for population control. In the couple's 2017 Annual Letter, [she wrote](#): "Saving children's lives is the goal that launched our global work. It's an end in itself. But then we learned it has all these other benefits as well. If parents believe their children will survive — and if they have the power to time and space their pregnancies — they choose to have fewer children."

Credible but also creditably disputed claims, especially in Kenya, that some Gates-related vaccines intervened in human reproduction, aside, Gates and his organization are interested in population control. Their work for a decade or more on tying vaccination to identification is clearly part of this agenda. Even taking the generous position of assigning to Gates the possibility that he is attempting to simply improve childhood health and reduce poverty does not negate concerns about using vaccination and health IDs to track the world's population. After all, such a scheme creates a system of control for population technocrats to direct the lives of billions of people in a power grab of unimaginable proportions — and consequences.

At least not everyone in the Trump administration is simply going along with the internationalist plan for the implementation of health IDs.

Speaking to Laura Ingraham on Fox News, Attorney General Bill Barr said he didn't like the idea of vaccine IDs and certificates to prove immunity to COVID-19. "I'm very concerned about the slippery slope in terms of continuing encroachments on personal liberty. I do think during the emergency, appropriate, reasonable steps are fine," Barr said when asked about vaccine certificates. Asked for more specifics, he continued: "I'd be a little concerned about that, the tracking of people and so forth, generally, especially going forward over a long period of time."

Opposition aside, if technocrats such as Gates achieve their aims, Americans will not be able to shop, work, travel, or do anything else without their vaccine/health ID, which will almost certainly end up in

some sort of technological and possibly injectable form. This likely would then be combined in the future with your credit score and other social scores, becoming an all-encompassing tracking and management technology for the world's population.
